Pulmonary hypertension: the bête noire of the diffuse connective tissue diseases.

Improvement of vascular endothelial function by the oral endothelin receptor antagonist bosentan in patients with systemic sclerosis. A controlled study.

Sfikakis et al. Arthritis Rheum 2007;56:1985-93

Treatment with bosentan reduced SAP from $59 + 12$ to 48 ± 6.5 mmHg ($p < 0.004$)

Bivariate correlations comparing the reduction of SAP to the bosentan-induced increase in brachial artery FMD revealed an inverse correlation ($p = 0.07$, $n=7$)
